

Symes Custom Sockets

APOPPS™ – A d j a s t a b l e P o s t O p e r a t i v e P r o t e c t i v e a n d P r e p a r a t i v e S y s t e m s

The Symes Socket is a VCSPS™ type socket with some unique features: there is a distal strap which will provide AP, ML and circumferential control and reduction (not unlike the VCSPS™), the socket has two unique slot sets, one is located, medially and laterally on the posterior section, at the distal belly of the calf and the other is located, medially and laterally on the posterior section, at the smallest portion of the ankle. This configuration allows for a variety of shapes and sizes to be comfortably protected by the socket. Most patients use the protective Symes socket for transfers. However, a UFOS™ would be required for extended or training ambulation and can be provided upon request.

It can be difficult to get custom services quickly, but not at FLO-TECH®. Custom sockets and systems are shipped on the same day as ordered (if ordered prior to Noon EST).

We also have the component features you are looking for – feet and attachment plates.

Symes Custom Sockets Made to Order From Practitioner Measurements

Visit Our Web Site For More Information

Our Web site at www.1800FLO-TECH.com offers a downloadable catalog in pdf (portable document format) that can be viewed or printed from the user's system for more information. In addition to company, product and services information, the site contains protocol pages and a frequently asked questions page. Users can submit a question with the online form and receive an answer by email, or return to the page to find an answer within a few days.

Our travel/show schedule is posted on the Web site, so you'll know where to meet our staff and examine the products in person.

Also featured on the site is an online form to request more information, as well as forms users would need to place an order (available in pdf format on the Web site or by request).

FLO-TECH®'s APOPPS™ and APOPPS-TF™ are clearly presented with images and text. The APOPPS™ has long been trusted by prosthetists for offering added protection, diligent wound care, controlled shaping of the residuum and early ambulation for transtibial, transfemoral and now Symes amputations. A variety of sizes and custom sockets (fabricated from measurements received in our lab by Noon Eastern Standard Time) are shipped the same day – making the benefits of the very latest in APOPPS™ prosthetic technology available to ALL amputees.
